

ABSTRACT

A cigar tobacco paper and a method for packaging the same is provided. The cigar tobacco paper is packaged with an enveloping means to hold a cylindrical shape. The cigar tobacco paper is
5 rolled into cylindrical shape and placed within an enveloping means. The tobacco paper is wrapped into cylindrical form causing the cigar tobacco paper to form a plurality of layers in cylindrical form. The rolled tobacco paper is then placed inside
10 a enveloping means having a diameter larger than the diameter of the rolled cigar tobacco paper. The encased tobacco paper within the enveloping means allows for the tobacco paper to keep a cylindrical shape until delivered and used by a consumer. The enveloping means may maintain the moisture and the flavor of the cigar tobacco paper prior to delivery to a consumer.
